Taskeva AirDrop

The global freelance peer-to-peer platform

1. Airdrop

To celebrate our listing on STEEX and our great community, we want to reward the community that we love with some love of our own! This Valentine day, You the Taskeva Community, are our valentine. We do not have a box of chocolates but we do have a basket of tokens to give to you. Starting on February 14th we will take the snap shot of the token holders on the waves platform. And for each community member we will drop a total of 20% more tokens into your wallet. We will not give any of the team wallets more tokens as it is our gift to you, for being such a great and supportive community.

2. Allocation

There will be four Airdrops that will be a total of 20% more tokens for each community member. Each airdrop rewards 4% addition to the token holding. In the final airdrop, an additional 8% shall be distributed only to those who maintain or exceed their balance of TASK at the time of the first snapshot.

Why Should You Care – The entire bonus airdrop of 4% more tokens will be awarded only to those that qualify. The final airdrop has been designed to truly reward the TASK token holders that are interested in the long-term survival of Taskeva.

3. Schedule

Over the next 2 months, we will be conducting 4 Waves token balance snapshots and 4 subsequent airdrops to TASK token holders, starting with the first airdrop on **February 14th at 12:00 p.m. UTI**

There will be a full snapshot/airdrop cycle before the next airdrop, allowing your balances and airdropped tokens to compound should you choose to participate.

Below you will find the complete airdrop schedule:

February 14th at 12:00 p.m. UTC

February 28th at 12:00 p.m. UTC

March 14th at 12:00 p.m. UTC

March 28th at 12:00 p.m. UTC (Bonus Airdrop—See Details Below)

4. Bonus Airdrop

The first three airdrop cycles will behave exactly the same and will offer holders a percentage commensurate with their current token balance. The fourth airdrop will behave a little differently, the details of which are highlighted below.

We shall issue a total of 20% more tokens to each community member across 4 airdrops.

Airdrops 1-3: 4% addition to token holdings per airdrop.

Airdrop 4: 8% addition to token holdings, with a contingency explained below.

Over the next two months, airdrops 1-3 will offer current holders an additional 4% of their total holdings, while the fourth Airdrop shall distribute an additional ~8% to qualifying accounts, at a minimum. Any holder that participates in all four airdrops shall receive a 20% bonus.

For example: A TASK community member holds 100mm tokens in their Waves wallet. She can expect to receive ~4 million coins per airdrop 1-3 and a minimum ~8 million on the fourth airdrop, should she qualify.

Fourth Bonus Airdrop & “Anti-Dump” Mechanism

In order to receive the bonus TASK tokens, your balance must be greater than or equal to your account balance at the time of the first airdrop snapshot.

This mechanism introduces the following considerations:

1. Since it is unlikely that all TASK holders will qualify for the bonus (as a result of not holding their original balance), those that do will receive a larger percentage of 8% airdrop.
2. If you do not qualify for the bonus, but hold TASK tokens during the time of the 4th snapshot, you will receive the standard 4% airdrop.
3. **In order to be eligible for the bonus, you must use the same wallet address for the first and fourth airdrop so the balances can be compared.**

Should there be any questions or concerns, please feel free to reach out to us. We thank you for your support of the Taskeva and for being amongst the earliest members of our growing community. We are incredibly grateful to have you here.

Important Note:

Your TASK tokens MUST be in a Waves cryptocurrency wallet which is the Waves Platform. Exchanges will NOT be supporting the airdrop and it is the sole responsibility of the token holder to make sure any tokens they would like credited toward the airdrop are in a wallet in which they control the private keys. Again, tokens left on an exchange will not be counted toward the airdrop.
